

UTAH

ARCHAEOLOGY & HISTORIC PRESERVATION

SEISMIC SIMULATION

Structural engineers, preservationists, and architects use computer simulations to model seismic forces on historic buildings. This helps them understand how a building can be expected to react in the event of an earthquake and identify which seismic retrofit techniques will be most beneficial.

Utah's community of preservationists invite you to explore Utah's history by participating in fun educational events all across the state. Throughout the month of May you will have the opportunity to learn first hand from experts by participating in hikes, walking tours, and presentations. Everyone is welcome and we hope to see you there. Scan the QR code to discover something old!
